

Mehmet Alp BASTURK

LEAD SOFTWARE ENGINEER

Ankara, TR | 0544 119 4567 | mbasturk.job@gmail.com | linkedin.com/in/alp-basturk

Lead Software Engineer with 8 years of experience in high-traffic, low-latency microservice architectures and strong expertise in AI-assisted software development. Brings 4 years of industry experience in the United States and holds a Master's degree in Computer Science. Accelerates coding, refactoring, test automation and documentation with AI tools such as Cursor IDE and Claude Code, increasing delivery speed without compromising code quality. Designs and builds scalable services with Spring Boot, and creates fault-tolerant, highly available systems by building event-driven data pipelines with Kafka and RabbitMQ. Manages cloud environments across the AWS and Kubernetes ecosystems, optimizes CI/CD pipelines, and strengthens system reliability with observability tools such as Datadog. Works effectively in Agile teams, coordinates with cross-functional and offshore teams, and mentors junior engineers.

Education

Master of Science in Computer Science 2024
Maharishi International University, Fairfield, Iowa

Bachelor of Science in Computer Engineering 2020
TOBB Economics and Technology University, Ankara, Turkey

Skills

- AI: Cursor IDE, Claude Code
- Languages & Programming: Java, JavaScript, SQL, Python
- Backend Frameworks & Libraries: Spring Boot, Spring Security, Spring Data, Spring MVC, Hibernate
- Architecture & Services: Microservices, Event-Driven Systems, RESTful APIs
- Messaging & Streaming: Apache Kafka, RabbitMQ
- Databases: MySQL, PostgreSQL, MongoDB
- Cloud Platforms & DevOps: AWS (EKS, EC2, S3, Lambda, CloudWatch), Kubernetes, Docker, Git, GitLab CI/CD, Jenkins, Maven
- Monitoring & Observability: Datadog, ELK Stack, Grafana, Prometheus
- Testing & QA: JUnit, Mockito, Selenium, Postman, Test-Driven Development (TDD)
- Practices & Patterns: OOP, Algorithms & Data Structures, Design Patterns (Singleton, Observer, Strategy, Factory, Adapter, Proxy, State, Template), Agile/Scrum
- Other Tools & Utilities: IntelliJ IDEA, VS Code, GitHub, Jira, Swagger/OpenAPI

Experience

Lead Software Engineer — Charter Communications (Spectrum Mobile) 2023 – 2026

- Designed and developed Java 17 / Spring Boot microservices processing millions of daily transactions in Spectrum Mobile's Network Service Layer.
- Built event-driven queuing services with Kafka and RabbitMQ, reducing processing latency by 30% and improving throughput.

- Managed deployments and production support on AWS EKS/Kubernetes, ensuring 99.99% uptime with Datadog and ELK monitoring.
- Led defect management through Jira and Datadog, cutting recurring incidents and improving release stability.
- Updated and maintained API documentation (Swagger, Jira) to align services with evolving business and technical requirements.
- Collaborated with cross-functional and offshore teams; mentored junior engineers and accelerated internal tools delivery with no-code/low-code solutions.

Stack: Java 17, Spring Boot, Kafka, RabbitMQ, REST APIs, AWS (EKS, S3, CloudWatch), Kubernetes, Docker, GitLab CI, Jenkins, Datadog, ELK, Swagger, Jira

Lead Software Engineer — Bumerang Bilisim

2020 – 2022

- Led a 4-person engineering team developing backend services with Java / Spring Boot for Decentralized Finance (DeFi) protocols, including Automated Market Makers (AMMs) and Liquidity Pools.
- Designed and deployed smart contracts (Solidity) on Binance Smart Chain, enabling token exchanges and liquidity provider tokens
- Directed requirements analysis, architecture design, and sprint delivery, increasing on-time feature delivery by 25%.
- Oversaw testing, troubleshooting, and optimization, reducing system defects by 30% and strengthening platform security.
- Mentored junior developers, introduced Git-based workflows, and improved database integration with PostgreSQL, enhancing overall development efficiency

Stack: Java, Spring Boot, Solidity, Binance Smart Chain, PostgreSQL, Git, IntelliJ, Remix IDE

Software QA Engineer — Enocta

2020 – 2020

- Designed and executed regression and automation test cases for the Enocta Learning Platform, ensuring reliable performance across thousands of active users.
- Automated regression testing with Jenkins and Selenium, improving testing efficiency by 35% and reducing release cycle times.
- Debugged and optimized existing tests, enhancing accuracy and cutting false positives by 20%.
- Documented QA processes and created knowledge-sharing guides, ensuring consistent practices across the testing team.
- Collaborated with developers to identify missing test scenarios, reducing post-release defects

Stack: C#, Selenium, Docker, Jenkins

Mobile Application Developer — Connected2.Me

2019 – 2020

- Designed and developed cross-platform mobile applications using React Native and Spring Boot, delivering 2 production-ready apps within aggressive deadlines.
- Implemented UI/UX features that improved user engagement and app responsiveness, increasing session duration by 20%.
- Led end-to-end development cycles including coding, testing, and deployment to app stores.
- Collaborated with designers and backend engineers to ensure seamless integration of APIs and optimized performance across iOS and Android platforms.

Stack: React Native, JavaScript, CSS, Spring Boot, Visual Studio

Software Engineer — Biznet Bilisim

2016 – 2016

- Contributed to the development of PDF eSignature software, ensuring compliance with cybersecurity and reliability standards.
- Implemented unit tests and debugging workflows
- Improved thread synchronization and thread pool management, enhancing application stability and scalability.
- Collaborated with senior engineers to deliver secure, high-performance modules under tight deadlines.

Stack: Java, Core Java, Eclipse
